A new star high up in the cinema! The ALP-Movielift – Typ PHC 1000 S

The easiest and simplest way of reaching the ceiling of a cinema in just 10 minutes. The Movielift PHC 1000 S makes changing lamps, smoke detectors or other items on the cinema ceiling child's play!

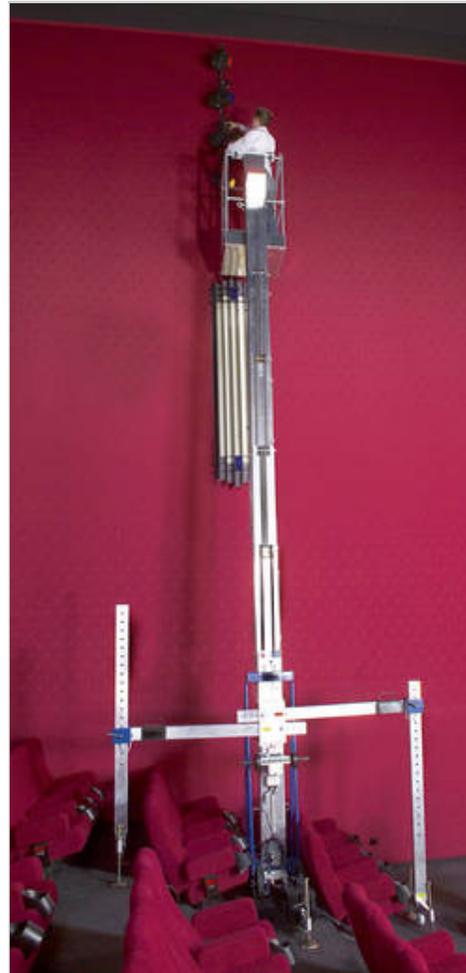

The Movielift PHC 1000 S originates from Germany and has been adapted to Australian Standards by All Lifts Pty Ltd.

All Lifts is the sole Australian representative for the Movie Lift and is able to provide 24 hr/7 days support and service.

The new Movielift PHC 1000 S makes cinema life simple and economic. Thanks to the high aluminium content, the new Movielift PHC 1000 S – in spite of its very rigid construction – is extremely light and easy to use. Just two persons are sufficient to transport the Movielift and erect it at any desired point, e.g. between rows of seats.

Whereas scaffolding requires around half a day to be erected, the Movielift PHC 1000 S can be erected and be ready for use in just 10 minutes.

The special arms can be used in many different ways and make it possible for the Movielift to be erected even in difficult situations, e.g. where the floor slopes or directly at a wall. All the Movielift components are mounted on an elevating truck for transportation and with the aid of a electric stairlift which we can supply can be moved up or down steps in a simple manner. The Movielift is operated with 240 V. You need just a standard electrical socket near the place of use.

...erected and ready for use in just 10 minutes:

1. With the electric stairlift you can transport the Movielift in an uncomplicated manner up and down stairs.

2. The well thought-out Movielift can also be used in a simple manner between closely spaced rows of seats.

3. The high arms are also well thought-out. They extend above the seats and in this way give the Movielift stability and security.

4. The Movielift can still be moved with the rollers even after the basic unit has been built up. Thus it is child's play to move it to each desired position in the particular row of seats.

5. After the desired position has been reached, the rollers are released and the Movielift is secured with the aid of its support feet.

6. The basket for persons and materials is now simply suspended from the brackets provided for this. The basket immediately sits firmly and safely.

7. The 230V drive of the Movielift is mounted on a separate elevating truck and can be placed at a distance of maximum 10 m next to, in front of or behind the Movielift.

8. In just some 10 minutes two persons can assemble the Movielift and can then make an immediate start on the work that has been planned.

We are very excited about the arrival of the "Movie Lift" to Australia.

All Lifts Pty Ltd is the sole Australian supplier of the Movie Lift to Australia and as such we are able to provide our customers with 24 hour/7 day a week back up service on parts and service.

Please feel free to contact me should you need any further information.

I look forward to speaking to you again soon.

Yours Sincerely

Debbie Beasley
